## PROFILE

BCIT Computer Systems Technology student specializing in cloud computing, with experience building full-stack web applications and completing AWS deployment and automation labs. Contributing to a client capstone integrating Canvas with a language-learning platform. Brings freelance web development experience and collaborative Agile project experience.

## TECHNICAL SKILLS

**Languages:** JavaScript, Python, Java, C, Ruby, SQL, Bash, HTML, CSS

**Web development:** React, Node.js, Express, Next.js, Ruby on Rails, EJS, REST APIs, responsive design

**AWS:** EC2, S3, Lambda, API Gateway, SQS, DynamoDB, ECS, Fargate, IAM, CloudWatch; hands-on coursework and labs

**DevOps and systems:** Git, GitHub, Linux, Docker, Docker Compose, CodePipeline, CodeBuild, CodeDeploy, Elastic Beanstalk, Jenkins

**Databases:** MySQL, PostgreSQL, MongoDB, Firebase, MariaDB

**Testing and debugging:** Jest, Cypress, Mocha, Chai, GDB, Valgrind

## EDUCATION

### British Columbia Institute of Technology

Computer Systems Technology Diploma, Cloud option | January 2025 to Present

Coursework includes cloud computing, DevOps, operating systems, internet software architecture, algorithms, Python, and web and mobile development.

### Lighthouse Labs

Web Development Bootcamp Diploma | January to April 2020

## CLIENT CAPSTONE

### Canvas and VAuLT Integration

BCIT team project, in progress | Fall 2026 | Node.js, Express, Docker, MariaDB, LTI 1.3

- Implemented student and instructor session handling and login handoff in a Node.js gateway connecting Canvas with VAuLT, a language-learning platform.
- Verified QR-code generation for the student launch page and reviewed VAuLT API behaviour and iframe headers to support the integration workflow.
- Collaborated with teammates on dependent gateway components, documented client discussions, and prepared demonstrations of completed functionality.

## TECHNICAL PROJECTS AND LABS

### AWS Deployment and CI/CD Labs

BCIT coursework | Fall 2026 | AWS CodePipeline, CodeBuild, CodeDeploy, Jenkins

- Configured a GitHub source, CodeBuild build stage, and Elastic Beanstalk deployment in AWS CodePipeline; verified a successful pipeline execution.
- Completed an S3-to-CodeDeploy deployment pipeline and installed and configured Jenkins on an EC2 instance.
- Built Docker images, deployed a containerized web application using ECS Fargate, and practised AWS resource cleanup after lab deployments.

### Linux Shell and Systems Programming

BCIT coursework | Fall 2026 | C, Linux, Bash, GDB, Valgrind

- Developed a custom C shell with built-in commands, external program execution, background jobs, and pipelines.
- Extended shell behaviour with serial and parallel command execution, Ctrl+C handling, and background-process cleanup; compiled the final lab without warnings or errors.

### commUnity

Team project | May 2025 | Node.js, Express, MongoDB, EJS

- Collaborated in a five-person team to build a community pulse board with interactive maps, polls, and event management.
- Implemented geolocation APIs, real-time updates, and clustering to display neighbourhood-based results.

### Kandi

Web application | April 2020 | React, Ruby on Rails, Active Record

- Built music-festival features for browsing events, RSVPs, attendee messaging, and swipe-style discovery of other attendees.

## PROFESSIONAL EXPERIENCE

### Freelance Web Developer

Vancouver, BC | January to June 2023

- Designed and developed client websites, translating business requirements into functional layouts and delivering projects within agreed timelines and budgets.
- Created The Way Collective website using WordPress, integrating online booking functionality and embedded social media feeds for a barbershop and nail bar.
- Provided ongoing website maintenance and technical support to address functionality, security, and client requests.
